

education

project name

12 Classrooms Room Extension

project value

£1.2 million

description

This commission was complete in December 2003 and comprised at providing 12 additional classrooms at first and second floor "bridging" over existing ground floor buildings within a central court yard.

The construction works were carried out with minimal disruption to school

The next Phase of the master plan is to construct an Atrium between the new balcony and the existing school to provide a communal area below

The 12 No classroom extension was constructed whilst the school was in operation with minimal disruption.

The works were programmed to interact with the school timetable so as to avoid noisy operations during exam periods.

The new classrooms bridge over existing classrooms, which presented a challenge to the design team. The result was a building on programme, on budget and a happy client.

This project is true reflection of a **partnering** team working together.

client

Stokesley School

main contractor

Clugston Construction Ltd
